**Swim Longer
with
Solar Heating!**

Still the Best

The Techno-Solis panel has been imitated over and over again, but our quality has never been duplicated. We still use up to 35% more polypropylene and UV stabilizers than any other manufacturer in the industry.

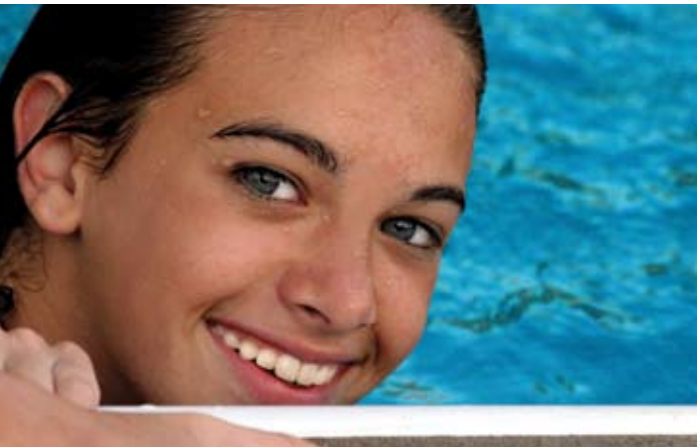

This means that our panels keep your pool heated longer, and have a much longer life expectancy than our competition.

Hurricane Tested

Techno-Solis panels are so well built that they can withstand hurricane force winds of 159.6 mph!

Maintenance Free

Once our panels are installed, there is no additional maintenance or cost involved. You just sit back and relax in your refreshingly warm swimming pool.

Guaranteed Quality

Techno-Solis tests every single panel that leaves our factory. This guarantees a perfect product every time.

Worry Free

We also offer the most comprehensive warranty in the industry, ensuring that all of our customers will enjoy their warm relaxing swimming pool for years to come.

Swim Longer

A swimming pool is a rather sizable investment. If it is frequently too cold to enjoy then you are not getting the most out of your investment.

Depending on where you live, installing a solar heating system can literally double the amount of time you can comfortably use your pool.

More Economical

When compared to heating your pool with other methods, solar heating can pay for itself in under 3 years.

Environmentally Safe

Solar Pool heaters produce "clean" positive energy, and unlike many conventional heating sources do not pollute the environment.
